A clear place for everyone

You

Tell us what you want to know or improve. Share what is already on site.

SunGene

Plan the architecture and BOM, source equipment and handle the agreed integration.

Local team

Carry out site construction, installation and wiring. We can help contact and coordinate them.

Your project & equipment contact · Andy

Andy is your contact for equipment requests, farm planning and technical questions. Start with a short message; the next step is to review the fit and any missing information. Additional engineering work and charges are agreed before proceeding.

contact@sungeneiot.com · sungeneiot.com/en/contact

One device. One field. Your next step.

A replacement sensor, a first monitoring point or a whole-farm plan — you can start here.

Understand the budget before you commit

Review the whole project budget. Your written proposal identifies the included scope and any optional or recurring charges.

Equipment & delivery

Selected devices, accessories, configuration, freight and applicable import costs.

Engineering work

Planning, data mapping, software functions and tests included in your agreed scope.

Local installation

Site survey, wiring, mounting and construction priced with the responsible local team.

Ongoing services

SIM/data, platform subscriptions, maintenance or support only where required and agreed.

Your quotation should make these visible

- Selected SunGene model, version, quantity and accessories
- Included work, deliverables and acceptance checks
- Equipment price, service charges, freight and delivery terms
- Availability, payment terms, warranty and return process
- Who controls the platform, data, accounts and recurring services

A product page describes a device family

A product page describes a device family. A kit combines equipment. A pilot checks an agreed result before a wider project. You can keep your existing platform and customer relationship.

Templates and sample data support discussion. They are not an exact-model wiring diagram, register map or evidence of a completed deployment.

If a device needs attention

Send the order or case reference, model, symptom and useful photos. We review the issue and applicable terms before agreeing repair, replacement or additional technical work. Confirm return instructions before shipping equipment.
